In February 1955, the German trade magazine Chemische Industrie¹ published an article concerning the production of inorganic chemical insecticides in Poland. Outlined below are comments of a leading West European businessman with first-hand knowledge of the chemical industry in Poland:

1. The information contained in the article concerning the production of inorganic insecticides at the Azot plant at Jaworzno and the Rokita plant in Brzeg Dolny is correct.
2. It is probably correct that one alkali electrolysis unit is in operation at the Azot plant in Jaworzno as stated in the article. However, the projected second and third units referred to in the article are nowhere near being ready for operation. It is doubtful whether any steps have as yet been made to procure and install this equipment.
3. The article states that Poland produced 2,250 tons of DDT during 1953. This figure far exceeds known Polish capacity and it is likely that the production figures have been considerably exaggerated.
4. Production of Benzenehexachloride was started at Brzeg Dolny toward the end of 1954, and not the end of 1953, as stated in the article.
